Legacy RPA to Power Platform

A strategic path from legacy RPA to the Microsoft Power Platform, built around what the business needs next rather than a rip-and-replace. The work is deciding which automations stay where they are and which are ready to do more.

SOLUTION BRIEF · OCTOBER 2026

WHO IT IS FOR

Organizations with a real RPA investment who are weighing where Power Platform fits next.

WHAT IT COSTS THEM TODAY

Per-bot RPA licensing, alongside custom integration projects that never quite end.

WHERE IT STANDS

An assessment method, not a deployment. No customer result to cite.

What to say in the room

- Their RPA investment already proved that automation works, and none of that value disappears.
- This is a portfolio decision rather than an all-or-nothing switch, and most estates end up in both columns.
- Forrester's own position is that RPA stays relevant by becoming the orchestration layer for agents.

What it is built on

- Power Automate
- Copilot Studio
- Dataverse
- Azure AI

WHERE IT STANDS · NOT MEASURED IN PRODUCTION

Assessment scores every workflow on stability, complexity and ownership.

WATCH THE WALKTHROUGH

The portfolio assessment. 1:43 minutes.
